Rich, When we put in the projector we used all existing wiring. I don't believe there was a direct route. Also if you are looking to and an HDMI there is some other thing to keep in mind.

The JBL-SDP-5 is doing the Video switching for the projector. Meaning the DVD,Sat, And cable box all plug into the JBL and the send the signal to the projector. The JBL does not have HDMI capability. So you would need to run a separate HDMI from each piece of equipment to the projector> With that also comes into the Programming of the remote control. It would have to be reprogrammed to work.

Hope this helps.

Nick

Hi Nick I am looking for a path or cable run for a HDMI wire run from the Sony projector to the DVD player on the 6th floor movie room. I pulled out the system rack and found a sealed sheet rock ceiling above the equipment rack, are your wires a direct run? Thanks Rich
