Here is the quote I got on the
Pheonix Canariensis
I'm still waiting on pictures.

Hi Igala, here's little information concerning the Canary Date Palm, Out supplier is very experience and professional when it come to grooming Canary for shipping out of the country. The cost will be \$795.00 per ct. (Example 10'ct \$7950.00 each)

A Word To The Wise

You need to know that P. Canariensis is one very temperamental palm and that they do not transplant all that well when initially harvested for transplant. Mature Canariensis are often decades & decades old when transplanted for resale. Because of the time frame necessary to reach these larger sizes, this inventory just isn't available in traditional nursery settings. The palms are field located from existing landscapes and then resold for use on new sites. Many companies that sell these majestic palms harvest them from the ground they grew in for all those years and then deliver them directly to a new site. This method is far less expensive than the harvesting & nurturing model that employs but it also exposes the buyer to a transplant loss rate of 35% and higher depending upon the season during which the palm is moved.

The commitment we make requires that we harvest the palms and then hold them in one of our secure nurturing areas for many months. We provide targeted intensive care during the initial shock period and then work continuously to reestablish a healthy new root system. Once the initial move has been successfully accomplished, the palms can be more safely relocated onto a customer's site where a reasonable degree of care will engender prompt establishment. Some of the palms will not survive the initial move and a very few others will fail even after everything we do to avoid losses but the fact is, when you purchase a Canary Island Date palm every possible precaution has been taken, the finest professional care in the industry has been rendered and the palms are well prepared for transplant into their new homes.

Environmental Behavior

- Cold Tolerance: Zones 8a-11
- Drought Tolerance: High
- Salt Tolerance: Med
- Light Requirements: High
- Wind Tolerance: Med to High
- Soil Requirements: Adaptable
- Moisture Tolerance: High
- Nutritional Req.: Moderate
- Loss rate during first 90 days after transplant: 35%
- Loss rate during first 12 months on site but after first 90 days: 10%

Identifying Characteristics

- Dense heavy canopies of green to dark green fronds with a thick, pineapple like nut comprised of cut frond stems just under the fronds.
- Very heavy caliper trunk, usually 28 inches plus.
- Trunks are semi smooth and display a distinct diamond shape pattern.
- Aerial roots are often found on the lower two feet of trunk.
- Canary Island Dates have been known to reach heights of 60 feet of clear trunk but they are very, very slow growers.

Thanks Gloria

Good Afternoon Gloria,

we spoke already, so if you could put an proposed invoice of what this will cost including shipping, and get it to me ASAP we can get the order rolling this week, Finally thanks!!

We Need This:

Red Ginger- 300

BouganVilla - 350

Red 200 (20 7gal the rest 1gal)

Lavender 50

Orange 50

white 50

Oleander -400

red- 150

white-150

pink-100

Desert Rose 100

red-50

pink-50

Haleconia (orange)- 300

Pride of Barbados 300

red-100

yellow-100

pink-100

Bird of Paradise 200

white-100

blue/green-100

Trees:

African Tulip- 25

Golden Shower -50

yellow- 25

red/pink-25
