From: Gary

photo #2 is Francelli sample that matches your sample, I believe it's as close as match as we can get,  
photo #1 patina animal that JP believes to be complementary to the stain  
photo #3 shows two animals of the same patina

the wood workers are completing the Doug punch list, open issues are:

- 1: the gap between the picture window is a functioning slot for hardware mechanism, that has to stay open
- 2: JP indicated that the bamboo mesh is acceptable
- 3: JP is not willing to replace blackboards with Slate

my understanding is that the room cabinets and columns are to be finished according to the approved sample,  
please confirm

my recommendation is the interiors of the cabinets should be finished the same as the exterior

upon checking Mechanical system, it appears that we may not have proper humidification and we have tech's  
coming out to review system settings
