Subject: BELA007 SRF Materials

Dear Dr. Jarecki,

As requested, please find attached the following materials from our files regarding SRF grantee **Belarus 007**:

1. Original & Renewal Application Materials
2. Publication Abstracts
3. Four publications:
 - a. Laser heating diagnoses and treats cancerous cells
 - b. Monitoring of Apoptosis in Intact Single Cells With Photothermal Microscope
 - c. Photothermal bubbles
 - d. Photothermal properties of gold

Below is this scholar's brief bio:

Belarus 007 / Biomedical Technology

This scholar is a medical research scientist and professor with over seventeen years of teaching experience in Europe and the United States. He received his Ph.D. in laser physics and acoustics from the Belarusian State University. In recent

years, the Soros Foundation, the US National Institute for Health, the National Cancer Institute, and the U.S. Department of Defense have sponsored his research. In addition to a depressed economic situation in Belarus, this scholar is concerned about the increasingly authoritarian rule that has threatened him and his colleagues. His supervisor remains in jail today, and the government has launched a criminal investigation accusing him of fraud and abuse of state property. Fearing the seizure of his research facility and possible arrest, he contacted the SRF. With the Center for Biological and Environmental Nanotechnology at Rice University, the scholar is now furthering his research on leukemia and cancer treatment.

Please let me know if we can provide anything further.

Thank you,

Sophie
