---

Jeff

Look at the review article (there is an enormous amount of research and FDA work being done every day) and here is a summary of what we are going to use the stem cells for and do research on.

I am looking for seed funding and think this type of research and medical advancements is something that your foundation can get involved with or even you. This is the future of medicine and we will have the tools and people to be a player.

The uses of Stem Cells from Adipose tissue that we can deal with

**Cosmetic Uses:**

Breast Augmentation  
Face Augmentation  
Buttock Augmentation  
Hand Augmentation  
Wrinkle Filling  
Skin Rejuvenation  
Hair Regrowth

**Non Cosmetic Uses:**

Ulcers  
Bed Sores  
Ligament Repairs/Joints

There is also antidotal stories of getting stem cells intravenously and just feeling better, thinking better i.e. overall rejuvenation

Also since we will bank the patients stem cells they will be available for future medical usage. The research points to the use in Diabetes, Neurological diseases,etc

Remember since we are using autologous cells the FDA has approved this and that is because they are autologous there can not be any harm!
