Attachments: chairSend.mov

The attachment might not download from here. Pls don't distribute. VERY cool.

I want you to meet Noam.

Subject: nose power (no hands)

Hello Melanie

When you sent me an email, there were indeed various projects around lab that are, i hope, scientifically interesting, but nothing that would meet your modest criteria of "something to change the world".

That may have changed over the past two months or so. We developed a low-tech low-cost device that allows completely locked-in (LIS) individuals to communicate and control a computer, and allows paralyzed people to drive wheel chairs, and all this through the nose.

Attached for your amusement is a home video we made yesterday. Note that this is not "data" (the first "slalom" section is accelerated by about 15%), but it does give you an idea.

So, do you want to visit Israel? I can probably give a good tour.

Maybe lets talk by phone. You can call me at work: [REDACTED] or on my cell [REDACTED]
[REDACTED]

Or suggest a number where i can call you

Sincerely,
noam
