10_degrees_East_of_North.jpg

Dear Jeffrey,

Hasan is traveling and has asked me to send you information regarding the orientation of the Hammam. Attached is our original study placing the building at an angle of 10 degrees East of North. This orientation was originally determined by the angle of the gym which is 15 degrees East of North and with further on site evaluation we found that in order for the center of the north terrace to look more centralized over the cove created by LSJ and Great Saint James that the building had to be brought back West at least another 5 degrees.

Also attached is a study showing an angle of 0 degrees using the axis of the center of the North and West terrace as well as a study showing an angle of 15 degrees west of North.

Thanks.
Andrew
