Jeffrey,

Craig wanted me to fwd this to you, his company takes waste water and purifies it, so you can water your landscape etc on the island,, he uses his machine in large yacht applications as well as residents.

He asked how you remove the waste water from LSJ.

He also is working with some people in dubai to purify standing water and get ride of the odor.

Thx,

Larry

Subject: Advanced Water Treatment Systems

Larry,

The photo of the three water samples are- Waste at 2170 mg/L, the middle is Piranha discharge water and the far right is city water from Lauderdale. I have also attached the test results from two labs. We are building a system now for a large yacht while the test unit (shown) is in Utah for the US Coast Guard Certification and IMO/MEPC 159(55) Certification testing.

Sincerely,

Craig Tafoya
