Subject: subwoofers

Date: Fri, 24 Jul 2009 12:33:05 +0000

I do like this Paradigm sub, but is only a 300 watt with 900 peak amplifier, compared to the 1200 watt class "D" amp in the 10" Velodyne we tried in Gym,

I am going to Audio advisors now,, Nick told me to demo the Klipsch triangle sub woofer that fits in the corner of the room,, I will try to bring one to your house, Audio advisors carries this line.

What time is a good to come by the house with some Subwoofers?

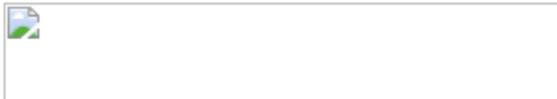

thank,

Larry

Experience high-impact bass with Velodyne's Optimum-10 subwoofer. A 1,200-watt amplifier and 10" driver provide the low-frequency muscle. Powerful DSPs (digital signal processors) monitor and adjust the Optimum-10's bass quality, for deeper, more accurate performance. Line-level and speaker-level inputs let you connect this sub to just about any home audio system. And you can use the variable crossover and phase control to fine-tune the sub's output, so the bass will blend in perfectly with the mids and highs coming from your main speakers.

 Alpine Authorized Online Dealer

The handsome, compact cabinet features a convenient front-panel display of your volume, crossover, and phase selections — no more struggling to read the settings on the rear panel. And the included remote lets you adjust the sound from the comfort of your couch. The Optimum-10 uses an automatic equalizer to tailor the sub's low-frequency response to the acoustics of your room. Just plug in the included microphone, place it in your favorite listening chair, and hit the "EQ" button on the remote. You get clean, low-distortion bass no matter what size your room is or where you place the sub. You can also choose from four customized audio presets that modify the sub's sound to suit your tastes and source material. And for late-night listening, switch to Night Mode to keep the kids asleep and the neighbors happy.

Details:

- acoustic suspension (sealed) enclosure
- 1,200-watt RMS Class D amplifier
- 10" front-firing driver with dual-layer voice coil
- frequency response 24-120 Hz (± 3 dB)
- continuously variable 40-120 Hz low-pass crossover with bypass mode
- 4-position phase control (0°, 90°, 180°, and 270°)
- stereo line-level/LFE inputs
- stereo line-level output with 80 Hz high-pass crossover
- speaker-level inputs with binding post connectors
- video-shielded (prevents magnetic distortion on tube TVs)
- Room Bass Correction automatic equalizer (microphone included)
- four customized listening modes (Movies, Jazz/Classical, Rock/R&B, Games)
- Night Mode limits maximum output
- volume and mute control
- signal sensing auto on/off
- remote control
- 13"W x 13-3/8"H x 16-5/8"D
- weight: 43 pounds
- warranty: 5 years parts and labor for drivers, 3 years parts and labor for electronics
