To JEE

It my understanding that,

innovative owner infrastructure, sprint provides service. As of the end of last year LSJ could get 2 x T.1 services to that pole at Greta point. For fiber to be run there it would require negotiating access with state and private properties to accomplish this would an additional cost.

Also once the cell tower was installed on the island how was it proposed to distribute signal to all the different structures, wireless is the infrastructure proposed by Val Com, you can go the fiber route but the cost would be far greater.

Also as of this week Val Com could possibly get Wi Fi and Wi Max delivered to the Island at a much reduced rate.

If the scope of this project has changed from Wi Max to Wi Fi then please let me know and we will change our approach.

Would review any completed detailed proposal at any time from any other source to resolve this issue for you

Regards Brice
