Only one was taken out of the bathroom. Arran said it was the second one that was put in. The first one failed.

Your existing unit is called the system 15 – it is good up to 550 cubic ft.
Your new steam room is 448 cubic ft, with two sides of glass, so you are just on the edge of capacity with your old unit

The unit I specified was called the system 30. It is good up to 1110 cubic ft.
It is actually , on closer inspection, two system 15s put together -
So we could buy one system 15 and add it to your existing 15 and with new controls have a system 30.
This will cost around \$ 3200 List price
