It's really expensive energetically for plants bc they have to move across a cell wall - so you know it has to be important

The other thing plants can do is shift their metabolic pathways around their available resources

Like glutamate / glutathione shift

Humans can't we always shift to glutamate and fry our neurons

It can't only ever do one thing based on available resources

That's how they age and die is when those resources get depleted

Using by getting messed up w stuff in soil
