---

There are two other major feature changes in addition to "desktop sync for iCloud" in Sierra that I forgot to tell you about:

1. Siri on the Mac
2. Disk cleanup: when you're low on disk space -- or you want to run it manually -- the OS has a utility that will clean up all sorts of things that are likely to eat your disk space -- including movies / tv shows you've already watched.

#2 especially, is potentially beneficial for your machines.

Thank you,

 James Ce, your Personal Genius,
