mobjects -- representations comprised of various sensory inputs and memory, (context) , may be thought of as multi variable differentail equations. or multi dimensional shapes, these shapes would have unique projections according to the dimension. . these projections could be considered attention or focus, . similar to wittgensteins images but i believe translated badly as mental pictures. they are not pictures they are mobjects. the picture (visual image) may be a piece but does not tell the whole story, . language may be an attempt to install the mobject in another brain. . the other brain can only install its own version. based on its internal cnstraints - environment. Unlike chomsky i dont think we need a thought for hungry, that is instinct similar to reflex. . "ow" seems to be a universal to pain . the word only necessary if it needs to be a transmission. . the facial communication as well. unless it relieves the pain? maybe. are you around today?
