CATALYST(S)

- **Technical:** The risk of a deeper retracement has increased following the reversal from this week's high which once again held the key .7056/.7110 resistance zone. The .6807/.6788 support zone will now be the key test as it includes last week's low and the channel support from the January low. Sustained breaks define a deeper short term corrective phase allowing a closer test of the .6640 area (200-day MA), if not the critical .6545 range lows from February.
- **Economic:** Chinese import/export data over the weekend, New Zealand inflation expectations, US retail sales & CPI

RISK(S)

- Continued soft US data, specifically consumer and inflation
- Global risk sentiment improvement and continued strong rally in equities

CHART(S): NZDUSD Historical Price
