Jeffrey

We are addressing airflow into Fan Air Modulation valve,,

We are installing new Servo Air Filter in diagram below,

We removed both side Servo air filters and discovered reduced airflow in L/H side filter using Nitrogen air thru these filters,

We want to make sure since this system has 40psi manifold pressure input and reduced to 9psi max for use in Fan Air modulation valve operation, so small reduction in supply air could effect Fan air Modulation operation?

We assume.
