Dear Jeffrey

I would not have said crispr etc is taboo - it's as mainstream as you can get, and scientific journals are full of papers about it.

One taboo topic I am interested in is the area of LENR - so called above unity devices that produce more energy than they should according to conventional physics.

There was a good summary a few months ago on the Edge website
<https://www.edge.org/response-detail/26753>

A 1 year trial of the 1MW Rossi ECAT reactor in the US seems to have gone well, and the report is due out in a week or two. Rossi recently confirmed that the energy output has been greater than 1.5 times the energy put in:

The Indian Journal Current Science has a recent special issue on LENR: Here is the link:
<http://www.currentscience.ac.in/php/feat.php?feature=Special%20Section:%20Low%20Energy%20Nuclear%20Reactions&featid=10094>

I am in contact with a company in Britain working on a very promising device, currently being tested in some UK government laboratories. .

Best
Rupert

No, just Canada where we spend the summer on a remote island in BC. Any plans for you to visit London?

I much look forward to meeting

Rupert
