Good day Rich,

FYI:

please expand on wiring? The wiring that connects the radios to the main complex switch. This was completed today along with minor adjustments to the radios on LSJ tower for maximum true put.
when will job be completed by as jee is coming thursday am? Hector says we should be online tomorrow. He will be opening the ports to the internet tonight. He states they should be ready for JE arrival on Thursday.
wifi? We have finalized the exterior wifi today (JE beach office is well covered). We will be finalizing the interior Wifi tomorrow.

Regards
Jruan

Good day Rich

I am off today. The choice team did Lsj on Friday and is currently on GSJ today (I heard there are heavy rains on LSJ and GSJ). I will get an update from Hector and forward it to you. Tomorrow Hector will commence with the testing.

Regards
Jruan

Good Evening Boss

FYI:

Choice completed their site preparations today. They begin the mounting of the equipment tomorrow 3/4 at 9:00 on LSJ side. According to Choice both islands sites should finish by 3/7, Link and wireless testing on 3/8.

Regards
Jruan

Good Evening Boss,

Allan, Omar, Hector and I finalized our meeting for the needed materials required to equip GSJ with internet in a few days.

I am requesting your permission to have a buried conduit pipe installed running from the GSJ solar farm to the Main Complex (In house). This is for Choice to pull the necessary cables down to the complex to complete the network.

Allan and Hector are confident that they will be able to start on Thursday barring any problems. They will confirm tomorrow.

Also Boss FYI:

As per our discussion on the dragonwave licensing procedure. My findings are as follows:

I spoke to Ms. Hardly at Micronet (the company that licensed your first dragonwaves) . They confirmed the timeframe that FutureTech stated that this process does take from 30 – 90 days.

The reason was explained to me as follows:

1. FCC 601 application is filled out and submitted.
2. It is then processed for an open sub-band frequency and filed with FCC
3. The FCC submit letters to all private, federal, and public agencies to verify that the sub-band will not interfere with existing frequencies in the vicinity.
4. They are given approximately 30 days to reply.
5. If there isn't a complaint filed the sub-band frequency is released to be programmed into the radio.
 - a. If the complaint is valid then the process between Micronet and the FCC is repeated.

I verified this information with Hector and Allan during our meeting. They stated approximately the same steps, they have to do this every time they order any kind of licensed radios.

Regards
