From what I could tell last week, it looks like the solos batteries are currently running at 85%. Not too bad after 3+ years. It would be good to bring a tech in for a system audit. They also have the ability to hook this up to the Internet so that someone from your team can remotely monitor the system or receive alerts if needed.

Let me know if you need anything else.

We can also call Peter Rosen from "ProSolar System" (850) 222-3554 on St. Thomas or someone from Solar systems can come out.

I'll get more info...
