If the boss says the glare was too much for the new monitor, this film should work:

Jeffrey wanted me to devise a way he could watch movies on the plane on a screen larger than the MacBook Pro (and so he doesn't have to carry the MBP with him). He said around 20" and NO GLARE!

I'm suggesting that we get an HDMI monitor, and use the Apple Lightning Digital AV Adapter. He can simply plug in his iPhone or iPad and play the movies on the bigger screen straight from it.

The only problem is finding a monitor that small...

I found this 24" Dell which I think would be perfect:

**Dell UltraSharp U2414H 24-Inch Screen LED Monitor \$216**

OR

**HP Pavilion 22xw 21.5-in IPS LED Backlit Monitor \$120**

<http://www.amazon.com/HP-Pavilion-21-5--Backlit-Monitor/dp/B00TJQX9D6/>

And we'll need these.

**Lightning Digital AV Adapter \$45**

**AmazonBasics High-Speed HDMI Cable - 9.8 Feet (3 Meters) \$6.50**
