A book written in 06. . boring beyond belief. how about showing kids what the final web page should / could look like on first page. no interactive . roger this is nuts. I am slogging through and I am motivated. kahn academy far exceeds this, far. and they suck big time

learning from experience is best done in simulation first; when it matters money has been spent on god simulations (air flight; tanks fighting etc); we have built what we call social (as oppose to physical) simulation for business and military -- it is how I make a living); they are not physical experiences, and keeping costs down is always an issue, but they seem real enough

but computer science is very different; if you want to build something in CS there is nothing to simulate since the computer is doing that naturally; you are already in the real environment; the computer speaks a language and you must learn it;

if I wanted to teach you a foreign language (which I have done too) I could put you in that country in simulation and you could try talking; still to start you would need to learn some words first; our language programs assumed you knew some already but you dont know any HTML; so you must learn it first; since books have done this, we hae no need to replicate them; so this not representative of what we usually build; we already have a computer that speaks he langguage; we dont already have a simulated medical or legal environment for example so we would have to build it and then we could throw you in
