---

There is no a foundation but a project of one.

My wife's dream is an extra curriculum mathematical program for children, say starting from 12year old that should include

1. a center in Paris with more or less regular classes;
2. systematic free of charge(!) summer schools/camps for children.

In both cases the lecturers must be university (graduate and under graduate) students

My wife began making some inquiries, talking to relevant people but interrupted everything last year because of the baby

On needs , besides a financial support to find an enthusiastic coordinator who will find out what are necessary steps must be taken

I expect help from

Center for Research and Interdisciplinarity (<http://cri-paris.org/>)

created and run by Francois Taddei (<http://cri-paris.org/team/francois-taddei/>) -- a bright biologist who developed a novel educational system/program in science, but who is also very open to mathematics.

misha

PS I plan to go to NY something around 19th Sept. but am not certain if I will be free to do this.
