Feeling good – Thank you

Did Valdson say that speed is that always 15 up and  15 down or just today as it was supposed to be 200 up and 200 down
Valdson was very forceful in not wanting any help from James or Bella or MJ and insisted on using ISC
Valdson led us all to believe that after ISC work all was working
Attached are some emails from James and MJ

**Subject:** Fwd: EPSTEIN / ISC facture 21avril15

Hi Valdson,
Please approve payment for the attached invoice from ISC. As i understand from the invoice ISC is charging 207 Euros for 2 technician 3 hours spent to run cable to connect 2 sides of the apartment, as we requested. **350 Euros** is charged for the adjustments made to the system to work properly. Is it extra or it is part of equipment installation contract?

Thank you,
Bella

Please find attached the invoice I just received from ISC (by post) amounting to 884.40 for the services rendered when ORANGE came to install the optic fibre line. Please confirm that I can proceed with its payment from Mr. Epstein's account in Paris.

Best regards.

I reviewed the situation with Valdson and confirm what Valdson and myself have already explained concerning the installation of the optic fiber:

ISC telephone installation has been completed.
Mr Moura from ISC will be present in the apartment while ORANGE will be installing the "livebox".
Mr Moura explained to me on the telephone that the "optic fiber livebox" (one for the 2 apartments) will be located in the technical room ("local technique") of the second apartment and a cable will be installed from there to the technical room next to Mr. Epstein's office (using existing cables).
This installation should (after verification this Wednesday morning) cover the 2 apartments.

Best regards.

**Subject: EPSTEIN / Optic fiber - Proposition Commerciale ORANGE**

**Date:** March 13, 2015 at 9:57:22 AM EDT

This replaces the previous mail erroneously sent:

**Internet Pro Fibre:**
requires a livebox pro
option: "equilibre" 45€/month + VAT
option: "intense" 50€/month + VAT
speed: **up to 200 mega (symmetrical) - i.e. up to 200 Mbits in reception, and up to 200 Mbits when sending**
20 mail boxes to keep up to 10 Go and send mails up to 20 Mo
fixed IP address to facilitate access from outside
fixed line required to be connected to the livebox
wifi
for telephone calls via internet: special rates
livebox pro: 5€/month of rent
TV access box: 49€ tax included
business everywhere (domino)

**La Fibre Pro:**
requires a livebox
option: "equilibre" 65€/month + VAT
option: "intense" 75€/month + VAT
speed: **up to 500 mega - i.e. up to 500 Mbits in reception, and up to 200 Mbits when sending**
20 mail boxes to keep up to 10 Go and send mails up to 20 Mo
fixed IP address to facilitate access from outside
fixed line required to be connected to the livebox
wifi
for telephone calls via internet: special rates
livebox pro: 5€/month of rent
TV access box: 49€ tax included
business everywhere (domino)

NB: Please note that the telephone system (discussed with ISC) installed in the Paris apartment has nothing to do with internet and is not compatible with optic fiber.

**Please advice which subscription should be selected ("internet pro fibre" or "la fibre pro") for all internet ORANGE subscriptions in the Paris apartment, so Valdson can contact ORANGE to get the appointment for the installation of the optic fibre.**

Best regards.

**Subject:** Re: EPSTEIN / tcf - ISC - ORANGE

All,

I won't be available on Monday afternoon, please accept my comments here. I've attached a new diagram demonstrating what I mean.

Currently there are two ADSL internet networks that are independent of each other. One comes into a maintenance closet of the newer side of the apartment, the other under the desk in JEE's office in the older side.

• The BLUE lines depict the existing in-wall ethernet wiring on the newer side of the apartment. This provides that side of the apartment with strong and stable wireless connections. All the existing in-wall wiring on the newer side of the apartment terminates in this maintenance closet. I *believe* the telephone connections and alarm all terminate in there as well — I didn't really look for them when I was there, so I'm not sure.

• The GREEN dots indicate the two AirPort Expresses that are wireless extensions of the basestation at JEE's desk. This is less than ideal, since wireless signals are inconsistent, but should be okay as long as neither Express is moved.

• The YELLOW line indicates a Powerline Adapter connection for an AirPort Extreme that provides wifi to the kitchen and dining room area. These run ethernet/data signals over the electrical wiring. These connections are more stable than wireless relay connections, but are completely dependent on the quality and routing of the electrical wiring. (For example, I attempted to replace the wireless extensions — in green — with powerline adapters, but the rooms that needed the Expresses didn't find the data signal from the electrical outlets near them.)

• The ORANGE indicates the line from where MJ has described Orange's Fibre network coming in, to where we should be locating their modem / CPE. Hopefully there is existing conduit between those two locations, but since we can't leave the modem / CPE out in the hall, we are going to have to run this connection.

**Ultimately, we need to join those into one network that covers the entire apartment** — if not because that is what JEE expects (how all the other properties are configured), then to avoid paying twice for the same internet service (as we are currently) and to have all devices on one network so they are reachable from one room to the other.

There are several ways to accomplish this, the easiest is to run a single ethernet line from the maintenance closet on the newer side to the AirPort Extreme under the desk of JEE's office (preferred) or to the AirPort Extreme in the hallway behind the kitchen (acceptable, but dependent on the powerline adapter, so not ideal). This is indicated in PINK.

Ideally (and I can review these details to the support folks Voldson has working on the computers there), we'd have the new network configured thusly:

Orange Fibre modem/CPE
> AirPort Extreme in maintenance closet (controlling the network addressing and routing)
> existing network switch
> existing AirPort Expresses & AirPort Extreme on newer side of apartment
> new line to AirPort Extreme under JEE's desk (in bridge mode)
> existing powerline adapter to Kitchen AirPort Extreme
> existing AirPort Expresses in wireless relay

My big question is how the VoIP phones are wiring? I expect that they would have this same problems — where ever the PBX is installed, they'll still need to get signals to the desktop phone units. If they're running wires for the same reason, maybe we can get them to run cables for the internet at the same time?

I'm sorry I won't be available for the call. Please email me any questions.

Thank you,

James Ce

**Subject:** Orange Install

Hello Valdson,

Attached is a PDF of where I believe we should have Orange install the Fibre connection.

I am hoping then can go in through (or above) the door into the maintenance closet and install the Livebox Modem where the DSL modem is currently. With any luck, you will be able to just unplug whatever network cable is plugged into the DSL modem and plug them into the Livebox modem.

When your computer techs are back from vacation, I'd like to discuss with them how to join the FochApt01 and FochApt02 networks together.
