seth, Ive been having many email exchanges with noam. great fun. I am stumped. on the concept of a large probability space? entropy. . ? if the space is large enough , how does one know if there is independent events. . as the information would take so much time to travel between each and or observer. ? question 2. in music , one has a dominant tone and then harmonics. . a chord is a combination of those . lets say 1st third and fifth? . is that equivalent to a superposition at the quantum level? your ear performs a transform to tease out each tone after the fact. ?
