I've have for many years asked the wrong question. I had asked if Life is the solution , ? what is the question.
. it is apparent to me now that the question follows a misguided computational model. WRONG.

i think that Life is a process of processes of processes. it is not a solution at all. . in cat theory its called
functors. . functions on functions. each represented by prob p . an n dimensional map. . some shapes in the map
are coherent. defining a system. systems interact, intersect, merge etc. entropy being the sum of $\log p$ P .
