Lesley, my apologies to Jeffrey for the delay. I can only re-emphasize this is research and that Jeffrey will still be among the first few hundred to get this type of clinical analysis along with a portable copy of their data.

Also, as I previously emailed, once we get through this first batch of data, I'm confident I'll be able to provide some additional sequencing data for free in the future if he's interested.

Lastly, I just want to make sure you're aware this exome sequencing is not part of the pgp - so George is not responsible for any delay. (I'm perfectly happy with George being cc'd on any of our communications though.)

Sorry again for the delay,
Joe

Hello Joe and George...Jeffrey requested I forward to you both this past email stream...Please note Jan 12, 2015 Jeffrey was told around early Feb. he should have results...but again was told today there are more delays...

Thank you,
Lesley

Hi Lesley,

Please pass on that we are very close. The study should have final / full approval in 1-2 weeks; with analysis of his data completed in another 1-2 weeks. So please give until early Feb.

I apologize for this delay. He is delayed along with others in YPO (in fact, I will prioritize Jeff's analysis).

The second batch will not have this type of wait. It's mainly the result of being in the first pilot group.

Thanks,
Joe

OK, we'll do a deep dive on those gene associations for his data.

Jeffrey replied back! He says: diabetes and kidney issues!

Thanks so much!

On Dec 9, 2014, at 5:06 PM, Joseph Thakuria <[REDACTED]> wrote:

Please stress that providing the info is completely voluntary.

Theoretically it should make for a more personalized analysis and it gives him the opportunity to let me know if there is any medical condition he specifically wants me to do a deep dive with his data on. (The general screen for medically serious mutations will happen of course even without any additional info from him.)

Hi Joe! thank you so very much for the update...I am not sure if Jeffrey would like to provide any family medical history but will ask and get back to you...great to know things are moving along!!

On Dec 9, 2014, at 4:28 PM, Joseph Thakuria <[REDACTED]> wrote:

Hi Lesley, sorry for not replying earlier. I'm analyzing data now on the exomes we've sequenced. Jeffrey's raw data should be available soon 2-3 weeks and I expect everything to be wrapped up the end of this month.

Do you know if Jeffrey wants to voluntarily provide any personal medical or family medical history? We can personalize the analysis based on this info. For example, for people with a strong family history of breast cancer, I can make sure we do a thorough look at breast cancer associated genes in addition to the basic analysis for these individuals. Specifically, family medical history on sibs, parents, and grandparents can be useful - as well as any history of inherited disorders - especially if it is rare and early onset in life.

Thanks in advance for passing on this info.

Best,
Joe
