Good Friday news Rich ! no need to removed Royal Palm Tree. John Schiller brought with him Horticulturist Richard Murray to check on the fungus near the ficus and Royal Palm tree. It's not ganoderma our beautiful Palm tree will stay.  
Thanks

One royal Palm tree needs to be removed. The ganoderma (fungus) found near a ficus shrub is going to be tested per advise by Island Environmental.

Re removal of royal Palm maybe we can use the vendor that did the removal of Palm tree near the cabana. Janusz coordinated the removal.

Will wait for further instruction.

Hi Rich. Last Friday (10/10), Scotty from Island environmental was in the property to spray the plants. He called my attention to some fungus (mushrooms) on the base of one royal Palm & few near the ficus shrub. He said its ganoderma and will let his Boss come to inspect it.

Today, October 14, John Schiller & another guy were outside to check on the said ganoderma. John , asked me to check the Royal Palm with him which he said needs to go since it's untreatable. I asked him to make a report so that we can forward it to NY.

The white thing on the base of royal Palm are the ganoderma.

Thank you.

Louella
