Subject: WAPA / RO / Generator
Date: Tue, 05 Dec 2017 22:48:21 +0000

clinton hedrington who hugo says is the most technical person at wapa (and its chief operating officer) will come to LSJ either tomorrow or Thursday to hopefully get us up and running
i asked anna to have franks electric who verified cable for us present as well so we can get back to wapa power
danny vicars is on vacation this week which i think is a good thing as we will get honest opinions without him directing professionals down his path...

TSG will come tomorrow to look at RO plant and they believe high pressure pump failing is a IT programming issue..

plan b came to look at generators today and gave anna a grim report that the exhaust flaps rusted off and allowed water and salt in compromising 1 generator that is down
plan b said that they believe we will need 2 new generators and will issue us a report this week on their findings before we replace generators i want to obtain a second opinion from another cat certified technician "Remco - company in PR where we purchased"
daphne has been chasing remco to have them come asap

don't want to sound like a broken record but all our critical infrastructure is not being looked after properly with danny in charge and i strongly think we need a change..

140 of 147 panels were installed as of 11-28-2017
all inverters are up and running
new racking, conduit and wiring completed

main issue currently is the multicluster box
we had 2 and 1 was damaged from storms
pro solar tried to fix while onsite yet was unable to

last week i have authorized prosolar to order a new box which takes 4-6 weeks as they are custom made cost is approximately 15k
once that box is installed we will be at full capacity of 36kw
currently we have 18kw which is sufficient to run 9 ac units at once at they draw 1-2kw each but insufficient to run old RO that currently does not work..

generator is not needed to charge batteries however it is necessary when we have cloudy days..

pro solar is also trying to source a new generator for us and we need an RO solution (i still like containerized units 250-300k depending on size)
pro solar presented a generator option a few weeks ago however that unit was restricted to BVI and could not be sold to USVI

generator and ro are next key items to get into place..
jimmy so far has been unhelpful with this and i have no trust in danny who i think is the main cause of the generator / ro issues on LSJ..

i asked hugo hodge for a recommendation today of someone who can oversee our plant / electric / etc..
