i dont think many algorithms should be part of the brain. I believe that turning input into a coherent shape is similar in vision hearing and thought. we know more about vision. edges verticals horiz etc. why not the same for concepts. ideas. . the image i see must be decoded into a whole . the concepts i imagine need the same program. first black and white, shapes , etc. for vision. as the feedback loop develops. things come into focus. . same with thoughts. . I am still perplexed by how little control we have over the thing we call " I " / it does most things , it wants , it reacts without "I " input. the signal for repair is not under control , cuts breaks stings. all done by the magician with no way to override it.

Probably, I have o think more, but once you start thinking about how you think you never accept what everybody else think about how you think.

see, ? perceive? understand? illusion? all but i like the recursive shape space more and more. with closer iterations to what it means to understand. . my model is comprised of a set function that after recursion comes closer to coherence . but also depends on the subects algorithm. its very nice.

BTHW, I am going tonight to Princeton for a lecture by Mariano Sigman -- do you know him?

also I will meet a Russian/American biologist-pharmacologist who's fed 1000 drugs to 15 000 mice,

it doesnt. it only does in one dimension

I am not certain that "well ordering" fits here

On Mon, 4 Dec 2017 08:57:22 -0500, jeffrey E. wrote:

to say I understand something the contexts are the dimensions and the recursive process allows you to close in each dimension building up the object. almost like a camera focusing its lens, except they are images they are concepts,
