Greetings Mr. Epstein,

I spoke with Danny this afternoon regarding your directive for cleaning up the 5 storage bays in the Engineering shed. Outlined below is his plan, for your review, comments and approval:

Bay 1 (new Engineering storage):

Build in the shelving

Paint the walls and shelves

Brian will create a cement cap for the air vent on the back wall

Bay 2 (new Painting storage):

Complete the shelving

Paint the walls and shelves

Cement cap for the air vent on the back wall

Bay 3 (new Landscaping storage):

Build the shelves

Paint the walls and shelves

Cement cap for the air vent on the back wall

Bay 4 (Old engineering office - probably will become additional engineering storage)

Build a subwall to hide the old electrical - there must still be an access panel because this electrical is still in use powering the Manager's cottage and Danny will rewire it to also power the Engineering shed - shelving will be built on the subwall

The existing shelving to the left will be cleaned up and additional shelving added

The Chromix presently stored in this bay will be discarded - it was purchased to complete the main entrance, before the plan was changed to apply the "Devil Mix" gravel instead

Bay 5 (Old desal - probably will become additional engineering storage)

Danny plans to completely dismantle the old plant

Build shelving

Paint walls and shelves

The floors in all of the bays are currently tiled. In two of the bays the floors were leveled/filled during the wall repair. Danny had no plans to retile the floors. He also plans to rewire all 5 storage bays.

Danny presently does not have a timeframe for your review and approval for completing what is outlined above, but will work on it this week.

Currently, Clement and Benny are fabricating the doors. They will start on the framing tomorrow. I asked if having the doors on the old engineering and desal bays will pose a problem when the interior construction and

dismantling begins. They will not because the door hinges will allow for the doors to be removed and replaced easily so they are out of the way.

Danny believes the water on the floor in the old desal bay is due to a leak, which he will address when the desal is dismantled. The water at the entrance of the bays not under the shed is due to rain going in, which will be prevented once the doors are in place and sealed.

Respectfully submitted,

Daphne
