ways to raise money for ideas/ business is about ideas that make money, not merely good ideas , which there are many., the marketplace decides ,, sometimes irrationally , but thats the way it is. I am glad to see you are engaged and excited about your future. I will help leverage your success. many different options. but i would only do you harm by continuing to respond to " can i just have more". (albeit encased in fuller paragraphs ".) when you return from your meetings with your envisioned partners. I will sit with you and strategize. since they have so uch money to invest, they will not look to your financials. only your participation (if they are serious)

 [This Week on Kickstarter](#)

OCTOBER 04, 2012

This week's projects will help you make cool stuff: animate a miniature movie masterpiece, engineer a toy from scratch, or turn a memory into a piece of free art.

 [The Free Art Machine](#)

Free for all

The Free Art Machine transforms crowd-sourced imagery into handmade photo block prints, then finds creative ways to distribute them to the public for free. The Chicago-based project currently displays the work as "free art walls" in local coffee shops and galleries, but anybody is welcome to take part by submitting a piece of original artwork.

GoldieBlox: The Engineering Toy for Girls

GoldieBlox: The Engineering Toy for Girls

by Debbie Sterling

 Category Design

 Location San Francisco, CA

Antique animation

FlipBookKit can be many things: a hand-cranked flipbook of custom images, a mechanical movie maker, or a personal penny arcade machine. Originally crafted in limited numbers for a gallery show, enthusiastic public response inspired its makers to fashion special kits that could be built at home. Each comes with 30 flipbook panels, a manual hand crank, and printing instructions for creating your very own animated masterpiece.

Breaking the mold

GoldieBlox is the toy that engineer Debbie Sterling wishes she had as a kid. A combination construction set and book series, it allows young girls to both read and build along with its protagonist, an inspiring pint-sized inventor named Goldie. For example, when Goldie makes a belt drive for spinning all her friends, readers are instructed on how to craft their own miniature version out of ribbon spools and paper cut-outs. Sounds just right!
