Everybody loved dinosaurs when they were little, but some of us never outgrew it (well, yet anyway). Besides liking dinosaurs a lot (I have a T rex skeleton in my living room), I also study dinosaurs seriously enough to write scientific papers on them from time to time. After three years of effort on of my papers has just come out and it has made quite a splash.

My latest is a long technical article on the statistical issues in dinosaur growth rates. Now, I will readily admit that this isn't quite as broadly appealing as my cookbooks. Nor is it as cool as the things some of my friends do – like go into space, build rocket ships and so forth, but hey, I do what I can!

Here is the write up in NYT and Economist

http://www.nytimes.com/2013/12/17/science/earth/outsider-challenges-papers-on-growth-of-dinosaurs.html?_r=0
