My jeffrey,

To get the most out of me, I need to be able to work on my own. I need to conceptualise, work on space planning, and select furniture simultaneously. They all develop together and develop each other.

I like to do work marathons in quiet, not be distracted and not break. This enables me to maintain focus, follow a sequence of steps, and work with software relevant to the work in a decent amount of time. So that I can produce

-

- Cad drawings and elevations with options for space planning
- furniture selections and options with costing.

The way we were working (sitting together choosing things), I feel suppresses my skills and basically just makes me another person with good taste choosing furniture.

I will move forward with this. [REDACTED] can look in at any time and give me her preferences.

I love you forever

Xx
