Lets set up a call.

I have seen the deck Wyler is sharing from the consultant. 70 sats at first, polar orbits, \$3.5 billion, Ka/Ku band. Iridium style orbits. I've met him before.

Kymeta is important for this idea due to very low angles at equator given orbits.

Skybridge owned/owns zero spectrum. An allocation to a service by the ITU is not ownership.

Tren – Bill thought it would be good for Jeffery (on this mail) to connect with you re: O3B and other things he is looking at it.

I will et you two take it from here. – Larry

Subject:

greg wyler, the guy who was involved in O3b , owns the spectrum formerly owned by Skybridge. He has put together a plan to launch 100kg sats in leo. Bill thought Tren was the guy to speak to on this, supposedly requires under 3B.
