Jeffrey,,
Lav water fixed,,

Update from Gulfstream:

Good morning Larry, the technicians found the water servicing handle at the service door not fully seated and locked allowing air to vent overboard when the pump/apu was running. Seated the valve and all ops checks were good. I will run the APU again this morning to ensure the system is working properly with both the pump and bleed air. I will update you again once final checks are complied with.

Greg

Thx
Larry
