To: Jeffrey Epstein <jeevacation@gmail.com>

Although the initial plan is in the following documents including the business plan, the other obvious application is for an "open table" model to make an appointment for care at the best emergency facility or urgent care center geotagged to your location. It took us two years to geotag all the centers worldwide and we own all the information. Most emergency or urgent care visits are elective. Patients often arrive at a center that may not have the specialist available and wait for hours while the physician they need was in a center minutes from the one they chose. As far as urgent care centers you would not know which one in your location has radiology facilities or pediatricians etc. we also plan to list physical therapy centers and their expertise.

<https://itunes.apple.com/us/app/emergency-medical-center-locator/id477974669?mt=8>

The emergencymedicalcenterlocator free app was designed to deliver specific easily accessible information on the closest emergency medical center by medical specialty. It provides the closest cardiac, stroke, pediatric, trauma, burn, eye and international trauma center that are certified by the American College of Cardiology and American College of Surgeons to provide credentialed care. There are 3 well respected research studies from Duke, the University of Chicago and Yale that show that 75% of all medical centers in the U.S. do not have around the clock cardiac cath lab availability to open a clogged artery and less than 10% of patients are transferred to the correct emergency center in time to receive life saving treatment. We list only those centers for cardiac services that meet the American College of Cardiology standard of "door to cath lab" within 90 minutes. Another study showed delay in hospital transfer excluded 15% of otherwise-qualified stroke patients from intrarterial therapy that reduces damage from a stroke.

Having a easily accessible reference to state of the art medical centers geotagged to your location gives a patient critical information on the best available option for treatment. For those of us who are physicians it allows us to access information that if our patient is in another location worldwide the patient is in a center credentialed to treat their medical problem. This is why the Mayo Clinic is going to have their physicians access this information from the app. It is general information to know what hotels and restaurant services are available by location but prior to this app this information existed in multiple difficult to access web sites that were not geotagged to your location.

For the corporate executive we have a worldwide access to the best medical specialists and if you are in another location worldwide we not only provide real time review of your medical care by physicians in every specialty from Columbia Presbyterian, NYU, Massachusetts General Hospital, Johns Hopkins, Stanford,

Baylor, Boston Children's Hospital and the Mayo Clinic we have the access to provide you with follow up care in a medical center of your choice within 24 hours. For non emergent consultations we provide immediate access to top specialists. Just this week an Olympic rider fell off her horse in Stuttgart Germany and had a rare loss of vision from a retinal problem. She was given immediate access to the most renowned authority the Chief of the Department of Ophthalmology at Columbia University Dr. Stanley Chang. Later in the week we had a pregnant women in Paris with a very rare medical problem and she was referred to the specialist who handles this within 24 hours. We are developing a " cloud medical record" that can show radiological reports, and all pertinent data to multiple physicians at the same time and also show emergency treatment in any worldwide center in real time to a specialist in another location. The record will also keep track of the clients X-ray exposure over time. This service was initiated to solve a medical adverse event that occurred over one year ago. The Mayo Clinic Preferred Response that I provide assistance to, covers anyone on Net Jets. One client was in the Turks and Cacaos and a 5 year old was speared in the foot. Appropriately they were flown to the closest trauma center which was in Fort Lauderdale and at midnight I received the call from the Mayo Clinic that the plane was a half hour out and they were told that this trauma center does not take care of pediatrics so because of the information in the app the plane was directed to Miami Children's Hospital and the foot was saved.
