Jeffrey

hope this finds you well in every respect

attached one of the more bizarre papers i am a co-author on—showing that the more similar the 2nd:4th digit ratio is between the two sexes the more they display "gender equality" in such traits as female participation in the workforce or on the political stage—who would have guessed ?

many thanks again for your key support through this critical period—now mercifully over—the work was completed this spring and your Enhanced Education Foundation is thanked in the acknowledgments, as it is in a forthcoming paper showing a strong relationship between handedness (left or right) and relative symmetry of the two feet—for reasons that are by no means obvious

the critical elite sprinting paper is held up by one late reviewer at PloS ONE—could be prejudice against asymmetry as a useful concept—we shall soon see

i return to the U.S. in one week; if you are in town in September/October would love to see you

all best

bob
