Brice appears to be fitting the problems to suit the solution he wants to implement. The software I referred him to should give him an analysis of data usage on the network without having to revert to the Adtran.

(I don't really expect him to accept my solution, of course.)

i would not have the functionality of the adtran router regarding bandwidth utilization and recording with verizon service.
I would prefer this setup.

Hi James

speed test average 16 up and 16 down, please see attached

Usage around 30 to 40 GB, but there's slight issue with transitioning devices from MH network to RC network
I think it would safe to say 50 to 60 gb would be a regular usuage.
Both have the same SSID and password, will probably need Bob Picknell to check Ruckuss AP settings
Overall there have only been 2 outage. i just reset equipment and all was good
My one complaint is the Router has limited functionality ie, it indicates which device is on the network and but not device bandwidth utilization.
.Do you have issue with getting a Verizon Static ip and using Adtran router programmed for verizon with back up program for the T1
If Verizon service went down it would be an easy transition and I would be able to keep an eye on data utilization.

regards Brice
