Hello Caleb,

Yes, it was a great visit. I really enjoyed it! I will be there on 8/9. Does 10:30 work?

I have attached the following:

1. CV
2. Basil for Pre-Diabetes (The brochure I mentioned I created for dissemination to indigenous populations (also printed in the Hausa language)
3. Ethnophytotechnology: Harnessing the Power of Ethnobotany with Biotechnology (*Trends in Biotechnology*)
4. Jasmonate-induced accumulation of vincadifformine and echitovenine in hairy root cultures of *Catharanthus roseus* (in submission)
5. Crafting A More Environmentally Benign Extraction and Analysis of Pharmaceutical Precursors from a Medicinal Plant: A Student-Led Innovation (in submission)

If you would like to see additional work I can also send over my dissertation or portions that are most relevant.

Thank you,

John

John

Great to have you out. We transplant our seedlings this thurs/Friday and expect to be in a 4-6 week growth cycle. I propose we meet 8/9 to go over experiment design etc @bates - [REDACTED] free all day except 2-3p.

Does that work?

Looking forward to checking out a few of your papers in the meantime

Best

C
