---

Mr Epstein,

I spoke to the stone guy again on the brown color stones. It is a sediment (iron and dirt) film on the stone. We took an all brown stone and acid washed it with a wire brush and it cleans up very nice. He is confident it will all blend seamlessly. Here are before and Afters of a 20 second acid wash on the brown color blue bitch stone. He said when he acid washes the new stones he will do multiple acid washes to get the correct shades.

Very Respectfully

Kyle
