Good day All

The LSJ underwater fiber is active with data. Hector will monitor. Please report any buffering so I can report to the VIYA representative.

More updates:

The fiber reels for the gym, GSJ compound and RO runs arrive on plane tomorrow. I have lined up Liston and Earl to assist with pulling and termination of the fiber on 9/25/18 for the Gym and GSJ Compound. This will restore full phone and data services to the area that are currently on the temp radio link.

I have received the new Access points for the Cabanas. The Poe Controller is scheduled to arrive on Friday. I will then program the controller and APs and begin the installation after rerunning the fiber.
