Subject: GROMOV vs GRIBOV
Date: Fri, 15 Feb 2019 23:51:52 +0000

My mistake - I had GROMOV on my mind for Breakthroughs scheduling and blurrily read the email from GRIBOV, which was sufficiently abstruse, as if from GROMOV.

GRIBOV is a physicist/artist in Germany with an idiosyncratic multiverse theory.

I emailed GRIBOV to ignore, though as penance I agreed to read his impenetrable paper - and I sent GROMOV a jog (below).

Separately, Breakthroughs schedule coming next.

To: Misha Gromov <[REDACTED]>
Cc: "jeffrey E." <jeevacation@gmail.com>, Peter Getzels <[REDACTED]>

Dear Misha:

As you know, Jeffrey and Closer To Truth are collaborating on a major series for PBS on "Breakthroughs" in mathematics and other areas (e.g., biology, music) - and we surely want to feature you in one or more of the mathematics episodes. Hopefully, we will coordinate schedules.

When are you next in New York? We will be filming in New York in April and probably June, schedules being finalized.

Looking forward and best regards,

Robert

Dear Iourii:

Great to hear from you; I enjoyed our conversation at Jeffrey's. I received your paper with appreciation and great interest. Fascinating proposal, though i cannot say I follow it all.

Linde is a personal friend; I can send it to him if you like?

We would like to explore your ideas by interviewing you for Closer To Truth, website and PBS TV. As you know, Jeffrey and Closer To Truth are collaborating on a major series for PBS on "Breakthroughs" in mathematics and other areas (e.g., biology, music) - and we surely want to feature you in one or more of the mathematics episodes. Hopefully, we will coordinate schedules. At the same time, we can explore your thoughts on the multiverse as well.

When are you next in New York? (We will be filming in New York in April and probably June, schedules being finalized.)

Looking forward and best regards,

Robert

Dear Robert,

I deeply appreciate your strong intention with the bold interviews of the best physicists to be "Closer the Truth" about our universe and its basic physical mysteries.

Below is my new J.Phys. published article - I waited years for this opportunity (my model predicts the MATTER-ANTIMATTER ANTIGRAVITY, etc that was simply stupidly forbidden to publish in the most of dissent physical journals. Why stupid? Because this barrier existed without any experimental verification of the opposite case - matter-antimatter attractive gravity). But now it is published!

<http://iopscience.iop.org/article/10.1088/1742-6596/1147/1/012083/pdf>

Gribov I. A. 2019 **Periodic waveguided multiverse as a source of dark matter and dark energy**. J. Phys.: Conf. Ser. 1147 012083

This publication is very important for me, because now nobody can ignore this multiverse-concept and my authorship in the subject - **it is very possibly can become a story which takes place once in 500 years - as an invitation to the 4-th Copernican Revolution**. It is not common fantastic Linde's multiverse of the non-interacting, hyper-enormously big bubble-universes - which cannot explain the DE&DM nature at all, this is never directly testable dead lock by definition, as for example, the string theory postulate about "elementary" 1D-strings with $10^{-35}m$.

This article is about the **periodic waveguided multiverse (PWM)** with the intrinsically identical /Standard Model (SM)-like/, gravitationally co-interacting sub-universes - 3D-waveguides, it unites & expands the 4D-multiversal nature of the basic 3D-physical laws (SR, QM, gravity, includes the multiversal quantum gravity concept, establishes the multiversal - weightless - composite superfluid vacuum-medium theory, impossible without matter-antimatter antigravity, where our particles are quasi-particles - elementary holes in it, (that naturally explains the basic QM-miracles, etc) the multiversal by the nature. The PWM simultaneously explains the dark energy (DE) and dark matter (DM) nature and their trivially arising finetuning + steady universe flatness + self-levering density + its acceleration expansion, etc.

Waiting of yours response,

Sincerely,

Iouri Gribov
