I suggest the stories we tell , depend on the language available for the event as well as the observers state. so math stories are easy if you speak math. . music stories less so but rhymes with the concept. I think we need a language and maybe a new notation for biology. mathematics did not do well in describing most music. . it needed musical notation. I would fund a project designed to craft a bio notation. . division, growth. cooperation. membrane computing is a not very useful but brings some insights. . i think a bio notation that encompasses entities and their processs could be helpful.
