**Hi jerproject,**

Songza 3.0 is a giant leap forward in our goal of making the things you do every day better.

[Install Songza 3.0 from the App Store](#) today!

 Apple appstore

## 6 New Improvements on Songza 3.0

1) When you're in a rush, a long press on any Concierge situation (e.g. Driving) immediately starts playing the playlist Songza thinks you'll love most at that moment. Starting your Songza playlist can now be as fast as turning on your car radio.

2) Doing something special? From the Concierge screen on iPhone or iPod Touch, shake your device and tell Songza exactly what you're up to; Songza will then find the right music to make it better. For example, you could enter 'Entertaining' and Songza will find you music to soundtrack the perfect party.

3) Songza's HQ Audio feature, powered by Audyssey, significantly improves your headphone sound quality without increasing your data plan usage. With Songza 3.0's improved HQ Audio, many new headphone models are available and it's now easier to select your headphones whenever you add a new pair.

4) Enjoying your favorite artists is now better than ever. When you search for an artist, you'll see every expert-curated playlist on Songza that features them. When you make your selection, the playlist you choose will begin with a song by that artist.

5) To make music discovery easier, in-app tips help you move from playlists you're getting tired of to new playlists that will make you feel fresh all over again.

6) A new full-screen Concierge experience takes advantage of the iPhone 5 screen and removes visual clutter, while a simplified navigation focuses on the most powerful and user-friendly additional features.
