Subject: Background on google results

Date: Thu, 04 Jul 2013 17:13:11 +0000

Attachments: Jeffrey_websites.xls

Hi Tyler,

I work on Jeffrey's media and wanted to give you some history of Jeffrey's Google results and be available to you if you need any assistance.

Attached is the database for all of Jeffrey's websites, social sites, directories etc. It includes the usernames and passwords to enter the profiles. As you will see, he has profiles on LinkedIn, Facebook, Google +, Pinterest etc.

HISTORY:

We had the Google results down to one negative listing--both national and local (from a combination of press releases, websites, business directories, backlinks, updating the Wiki page, profiles etc). Then when I optimized the heading tags, browser names etc to 8 out of 9 websites, the results reverted to disaster.

My sense is that by optimizing *all websites*, the engines are now deprioritizing them as a group-- since there is overload.

Thus, does it make sense to reverse what I did so that the engines go back to prioritizing 4 out of 9 sites?

I leave this up to you. But wanted to give you some background.

Feel free to contact me with any questions. I can be reached at: [REDACTED]

Thank you,
[REDACTED]
