 [This Week on Kickstarter](#)

SEPTEMBER 20, 2012

This week's project will take you back to the time of the dinosaurs, into space with an exhibit of rarely seen material from NASA's inaugural flights, and out onto the open seas with a fleet of robotic boats.

Digital Dinosaur: Dryptosaurus

by Tyler Keillor

 Category Sculpture

 Location Brookfield, IL

Clever girl

Paleoartist Tyler Keillor has spent a lifetime building dinosaurs for museums, universities, and *National Geographic* documentaries, but his current undertaking might be the coolest yet: a full-body reconstruction of the little known predatory dinosaur, Dryptosaurus. Working with digital technology and the field's leading names, his model will be the most realistic and fully accurate to date. Your move, Spielberg!

Robotboat Mark VI

by Eamon Carrig

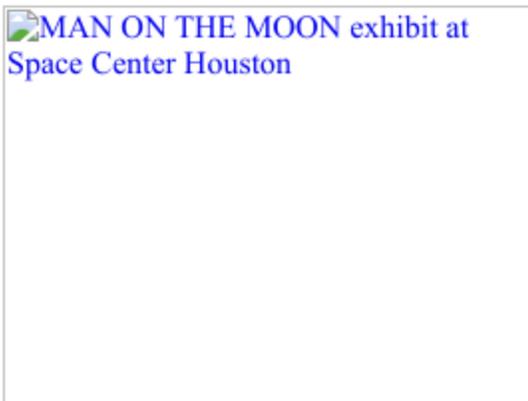

Category Technology

Location Silver Spring, MD

Satellites for the seas

The Robotboat Mark VI is a low-cost way to generate vast amounts of open data about our world's most abundant resource: the oceans. Conceived and built by a team of seasoned engineers, this fully autonomous, mechanical boat can sail itself anywhere (without fuel) in order to collect data on marine life and coral reef systems, measure currents, monitor oil leaks, and more.

MAN ON THE MOON exhibit at Space Center Houston

by Steve Pyke

Category Photography

Location Houston, TX

If you believe...

To celebrate the 40th anniversary of NASA's final moon landing, the Johnson Space Center in Houston will be hosting an independent exhibition of photos, film footage, and archival materials from the programs storied history. Some of the things to be seen include rarely glimpsed portraits of famous astronauts (Buzz!) and thrilling ephemera, like the first hammer to break off a piece of lunar rock. Is it just the lack of gravity, or are we suddenly breathless?
