Influence of the Cortical Midline Structures on Moral Emotion and Motivation in Moral Decision-Making

The present study aims to examine the relationship between the cortical midline structures (CMS), which have been regarded to be associated with selfhood, and moral decision making processes at the neural level. Traditional moral psychological studies have suggested the role of moral self as the moderator of moral cognition, so activity of moral self would present at the neural level. The present study examined the interaction between the CMS and other moral-related regions by conducting psycho-physiological interaction analysis of functional images acquired while 16 subjects were solving...

Instagram: Motives for its use and relationship to narcissism and contextual age

This study investigates motives for its use, and its relationship to contextual age and narcissism. A survey of 239 college students revealed that the main reasons for Instagram use are "Surveillance/Knowledge about others," "Documentation," "Coolness," and "Creativity." The next significant finding was a positive relationship between those who scored high in interpersonal interaction and using Instagram for coolness, creative purposes, and surveillance. Another

interesting finding shows that there is a positive relationship between high levels of social activity (traveling, going to...

Eyewitness Accounts from Recent Defectors from Islamic State: Why They Joined, What They Saw, Why They Quit

Abstract This Research Note reports on preliminary results of the Islamic State Interviews Project, based here on a sample of thirteen Syrian IS defectors who spoke on life inside the "Islamic State"(IS). A fuller and more systematic account will be published in early 2016 in book form. According to what we learned, all IS cadres undergo Shariah training in which they are imbued with a Takfiri ideology that allows them to deem all others, including Muslims, who disagree with IS' extreme ideology, as apostates who should be killed. Despite this indoctrination, all of our informants (all...

Review of “della Porta D. 2015, Social Movements in Times of Austerity, Polity: Maiden”

Over the last few years, there has been a certain degree of agreement among social movement scholars on the fact that the dominant analytical frameworks of social movement theory have been not fully able to explain the recent wave of protests, triggered by the economic crisis. Following this concern, some authors have started a debate about how to modify and refine these frameworks in order to better account for the current dynamics of mobilization. This type of reflection is precisely at the centre of the analysis of a book recently published by Polity Press (2015: pp. 249), titled Social...

Separating the Why from the What: Reply to Jonas and Markon (2015)

In this response to the commentary offered by Jonas and Markon (this issue) on our earlier work (Wood, Hensler, & Harms, 2015), we address points of agreement and disagreement on the nature and utility of functionalist and descriptivist accounts of personality. Specifically, we argue that explanatory and conceptual parsimony is more appropriate than statistical parsimony for evaluating the proposed models, discuss ways in which functionalist and descriptivist approaches can complement one another, and provide some cautions about interpreting latent traits.

Rousing the Facebook Crowd: Digital Enthusiasm and Emotional Contagion in the 2011 Protests in Egypt and Spain

The activist use of Facebook pages in the 2011 movements of the Egyptian revolution and the Spanish Indignados saw phases of exponential growth in user engagement in proximity to key protest events, signaled by spikes in likes and comments. This article analyzes these episodes as moments of digital enthusiasm facilitated by emotional communication on political Facebook pages. Drawing on quantitative and qualitative analysis of Facebook data, I argue that two elements concurred to build moments of digital enthusiasm: (a) ...

Celebrity Embodiment - Introduction (from A Companion to Celebrity)

Celebrities come to us in and through their enchanted bodies. These bodies emit magical signs and they give off powerful feelings and mobilize affects that are heightened and intense. Celebrities often stand as perfected or flawed creatures, embody identity politics, and give meaning to the imagined body of the nation-state. In this respect, golfer Tiger Woods becomes, first, the embodied truth that the United States has entered a post-race state of greater social equality (Berlant 1997), and, second, the reconstituted radicalized myth that black men are, after all, essentially sexual...
