

Richard Kutnick, MD

Name: BROCKMAN, JOHN

Study Date: 08/25/2015 02:08 PM

MRN: [REDACTED]

DOB: [REDACTED]

Age: [REDACTED]

Gender: [REDACTED]

Referring Physician: HELLMAN

Cardiac

Height: [REDACTED]

BSA: 2.09 m2

Weight: [REDACTED]

BP: 100/70 mmHg

HR: [REDACTED]

Previous Surgery: [REDACTED]

Indication: AFIB

Interpretation Summary

A two-dimensional transthoracic echocardiogram, with color flow Doppler was performed. The study was technically adequate. Heart rate in 130-150 range during study.

Interpretation Comments

- The left ventricle is normal in size.
- There is borderline concentric left ventricular hypertrophy.
- There is mild to moderate global hypokinesis of the left ventricle.
- LV ejection fraction estimated in 40% range
- At least moderate left atrial dilation
- At least mildly dilated right atrium
- There is mild to moderate mitral annular calcification.
- There is mild mitral regurgitation.
- There is moderate tricuspid regurgitation.
- Mild calcific non-stenotic aortic valve thickening

Left Ventricle

The left ventricle is normal in size. There is borderline concentric left ventricular hypertrophy. LV ejection fraction estimated in 40% range. There is mild to moderate global hypokinesis of the left ventricle.

Right Ventricle

The right ventricle is normal in size and function.

Atria

At least moderate left atrial dilation. At least mildly dilated right atrium. The interatrial septum is intact with no evidence for an atrial septal defect.
