She could have bad veins peripherally

She could be dehydrated w collapsed veins

She could have infection risk sites that limit placement

iMessage

One option is always to send for radiologic guidance of line placement or get anesthesia to put in central access or call surgery

Those aren't always done at every hospital overnight sometimes they only do 9-5

Especially if she's already had her doses of vanc for the day

Sometimes also having something to "control" can be helpful

So for example a decision or a timeline or an if/then scenario
